*Good arguments for  
Cocopeat & Cocofibre*

# gramoCOCOPLUS

## GOOD ARGUMENTS FOR GRAMOFLO

- 1 Selection** of three Copeat-quality levels:
  - + **Type 30** for a share of up to 30%
  - + **Type 60** for a share of up to 60%
  - + **Type 100** for an especially high share of up to 100% and for very sensitive cultivations.
- 2 More precise adjustment** of the Copeat-salinity for the respective cultivation requirements:
  - + continuity with the chemical and physical characteristics
  - + especially high quality level
  - + good price-performance-ratio
  - + biologically conformal.
- 3 Own procedure** for Copeat processing in own production facilities under controlled conditions:
  - + compliance with local environmental standards
  - + reduction of water usage in origin countries.

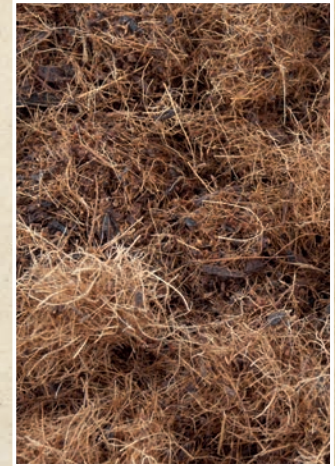

Further advantages:

- sourced with consideration of social standards SA 8000.
- transportation with attention to the CO<sub>2</sub> balance per vessel to nearby harbours.
- renewable resource, which utilisation complies with the recycling.

CCOPEAT\*

\*Raw material recovered from the mesocarp of the coconut

COCOFIBRE

By now, Copeat and Ccofibre are proven peat substitutes in professional horticulture and sufficiently available residues from coco processing.

This concept being aspired by Gramoflor has been tested extensively by the own research and development department and also has convinced in field trials.
