

# Bio

Gramoflor's **Bio-Erden** provide the perfect soil for the ecological growing of healthy plants. They consist of high-grade raw materials like North German Peat, organic wood fibers, compost and organic spelt husks, also enriched with valuable organic nutrients.

### Bio Blumenerde

- the perfect universal, organic potting soil for the hobby gardener
- ideal for pricking out young plants in smaller and larger pots
- it is also suitable for planting bedding and balcony plants in tubs and containers
- for the repotting of older plants from tubs and container plants

### Bio Kräuter- & Gemüseerde

- this organic herbal and vegetable soil is highly versatile
- for sowing herbs and vegetables
- for further cultivation of young vegetable plants
- for repotting herbs

#### Packaging sizes:

- BIO Blumenerde available in bags of 20, 45, 70 litres
- BIO Kräuter- und Gemüseerde available in a bag of 20 litres

RESPONSIBLY PRODUCED PEAT + RENEWABLE RAW MATERIALS + ORGANIC NUTRIENTS = OUR BEST ORGANIC CHOICE

### Your support for mire and climate protection

By purchasing this soil you will support a responsible peat extraction and the development of living mires in Germany:

- Intact mires will be unaffected. We prefer the North German Peat, which is extracted in line with the Lower Saxony Mire Conservation Program.
- Valuable resources will be saved. For the production of our soils we use peat only as little as possible.
- CO<sub>2</sub>-emissions will be reduced. We only extract our peat in Germany to avoid ways of transport.

We commit ourselves to work responsibly and with respect for further generations. Please support us!

Gramoflor offers a full range of potting soils in professional quality

# OUR FULL RANGE

for the ambitious hobby gardener

## Best nutrients for a strong plant growth

For healthy plants, the expertised R&D team of Gramoflor has created these recipes of potting soils which provide all required nutrients for primary care. The result: vital plant growth.

## Using renewable resources, saving limited resources

Peat still offers the best properties for a healthy and rich plant growth. But peat from Germany is also a limited resource, which should be used rational. Most of our home gardening soils are peat reduced. Next to the responsibly produced peat, renewable raw materials like wood fibers and spelt husks are used. They are specially prepared for soils.

## High quality Made in Germany

True to the message "quality from the start!" we produce high-grade soils in our own factories in Northern Germany. For this quality statement we make no differences between the requirements of the professional horticulture and the hobby gardener.

This could be the space for your individual logo (printed in black)!

# POTTING SOILS
